

Demonstration of Proposed Features

Date	04 July 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the planning phase of the Credit Card Approval Prediction project and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed machine learning–based credit card approval solution.

S. No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Applicant Input Form	Web form (predict.html) capturing Income Type, Employment Duration, Monthly Income, and Credit Score.	Implemented	Yes	Verified with multiple sample applicant profiles.
2	Model Integration	Flask backend loads the trained model (credit_card_model.pkl) once at startup using joblib.	Implemented	Yes	Confirmed model loads without errors on server start.
3	Real-Time Prediction	Submitted form values are converted into a feature array and passed to model.predict() via the /predict route.	Implemented	Yes	Tested with approved and rejected applicant scenarios.
4	Result Display	result.html shows a clear Approved / Rejected outcome with a supporting icon and color cue.	Implemented	Yes	Verified green check for approval, red cross for rejection.
5	Error Handling	try/except block in app.py catches invalid or malformed inputs and returns a readable error via result.html.	Implemented	Yes	Tested with missing and non-numeric field values.
6	Local Deployment	Application runs on the Flask development server (http://127.0.0.1:5000) with debug mode and auto-reload.	Implemented	Yes	Confirmed via terminal logs and browser access.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
