

Brainstorming & Idea Prioritization Template

Date	02 July 2026
Team ID	XXXXX
Project Name	Credit Card Approval Prediction System
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Alia Suhana	Train and compare multiple ML models (Logistic Regression, Random Forest, XGBoost, Decision Tree) to predict credit card approval outcomes	Model Development	1
2	Bellamkonda Venkatesh	Build a Flask web application where credit analysts can enter applicant details and get instant approval/rejection predictions	Web Development	2
3	Kamakshi Karri	Engineer features from raw applicant data, including converting multi-class payment status codes into binary risk labels	Feature Engineering	1
4	Mallampati Bhanu Keerthi	Deploy the best-performing model using IBM Watson Machine Learning for scalable, real-time cloud predictions	Cloud Deployment	3
5	Karri Pujitha	Add a customer self-service portal so prospective applicants can check their eligibility before formally applying	Web Development	2
6	Alia Suhana	Create a compliance dashboard for batch-screening high-risk applicants with past-due loan records	Compliance & Risk	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Train and evaluate ML classification models (Logistic Regression, Random Forest, XGBoost, Decision Tree) for credit card approval prediction	High	High	High	Yes
2	Develop a Flask-based web application for analyst screening and customer self-service eligibility checks	High	High	High	Yes
3	Deploy the selected model via IBM Watson ML for cloud-based, real-time predictions with a compliance review workflow	Medium	High	Medium	Yes
